

EJ Special

Description

EJ Special White is a very creamy, easy-to-print ink for general purpose ink for T-shirts and sweats. This white ink is perfect for any environment with manual or automatic equipment. EJ Special White is primarily for screen printing light, medium, and dark colored garments or as an underbase. As one of our top selling inks, the EJ Special White should not be ignored.

Printable Fabrics

Light, medium, and dark 100% cotton and poly/cotton blend T-shirts, sweats, and shorts. Use on 100% nylon and 100% polyester is not recommended.

Screen Mesh

110 to 230 monofilament screen mesh is recommended depending on the detail of the art work, color of the ink, and color of the garment.

Squeegees

60, 70, and 80 single durometer rubber is recommended for most applications.

Flash Time & Temperature

Flash for 5 to 6 seconds with a standard infrared unit. Excessive flash time or temperature is not recommended. This may cause dye migration or over-print adhesion difficulty.

Curing

The entire ink film must reach 320 degrees Fahrenheit. Every conveyor dryer will operate differently due to the large number of variables. Under-cured garments will likely exhibit cracking or flaking after washing.

Reducers

All of the inks we manufacture are ready-to-print. If reducing is required, please add Curable Reducer, Visco Minus, or Reducer #2 (5% maximum).

Cleaning

We distribute numerous cleaners for our plastisol inks. These cleaners include: PW4, IR4, Franmar Chemicals, Screen Wash, and Citrus Green.

Available Colors

White is the only color available.

Important Note

Always perform a pretest print and test cure conditions on the fabric to be printed to establish the best results. Stir inks vigorously before each use. Viscosity may need adjusting for best results. If there is ever a question about a print job, call us at 1-800-942-4447. We are always happy to help!
