

TECHNICAL DATA SHEET

SHORT DESCRIPTION:

Auto Formula Additive is used to reduce ink stickiness and viscosity of plastisol inks. This is great for preventing ink from running up the squeegee. It also may help the ink to clear the screen. We can add the Auto Formula Additive to your ink before we ship it or you can purchase to add yourself.

AUTO FORMULA ADDITIVE BENEFITS:

- May be added to any plastisol ink by One Stroke Inks.
- Economically priced.
- Available in 8 oz. bottles and gallons.
- We can mix Auto Formula Additive to your ink before we ship it to you.

MIXING INSTRUCTIONS:

- Add in 1 oz. increments to 1 gallon of ink until desired consistency is reached.
- Do not exceed more than 3 oz. to 1 gallon of ink.
- Stir vigorously with stir stick or mixing drill for 3 to 5 minutes.
- Reduce only the amount needed for a particular print job.

Always perform a pretest print and test cure conditions on the fabric to be printed to establish the best results. Stir inks vigorously before each use. Viscosity may need adjusting for best results. If there is ever a question about a print job, call us at 800-942-4447. We are always happy to help!
