

TECHNICAL DATA SHEET

SHORT DESCRIPTION:

Visco Minus is a chemical reducer which will very quickly lower the viscosity of any plastisol ink. Since very little Visco Minus will go a long way, you can lower the ink viscosity without harming opacity and bleed resistance as much as a standard reducer.

VISCO MINUS BENEFITS:

- Quickly lowers ink viscosity.
- Great for use with regular temperature and low temperature plastisol ink.
- Can be mixed in by hand, drill, or machine.

MIXING INSTRUCTIONS:

- For 1 gallon of ink, add 1/2 oz. Visco Minus.
- For 1/2 gallon of ink, add 1/4 oz. Visco Minus.
- For 1 quart of ink, add 1/8 oz. Visco Minus.

Important Note: The above mixing instructions will drop the ink viscosity about 20%. You can repeat the above steps if the ink is still too thick.

Always perform a pretest print and test cure conditions on the fabric to be printed to establish the best results. Stir inks vigorously before each use. Viscosity may need adjusting for best results. If there is ever a question about a print job, call us at 800-942-4447. We are always happy to help!
